

# A Superior Approach to Reviewing Modern Communication

# The new standard.

ChatCraft™ by Lineal enables users to view, analyze, tag, and produce collaborative data (i.e. Teams, Google Chat, Slack, etc.) naturally and efficiently directly within the industry's leading platform, Relativity. Designed to streamline review, ChatCraft disseminates tagging at the message, daily, and conversation levels, and brings associated attachments inline. Further, ChatCraft allows users to visualize chat history via timelines, revealing key trends based upon communication activity. Finally, to expedite the production process, ChatCraft allows case teams to quickly export only the relevant messages, removing the necessity to redact countless unresponsive messages.

We designed ChatCraft to be used seamlessly in custom workflows powered by our technology suite, Amplify, modernizing the industry's approach to reviewing modern communication.

# Unlock enhanced chat review.

Explore the remarkable advantages of ChatCraft.

## Efficiency Boost

ChatCraft accelerates chat data review and production.

## Review Flexibility

Toggle between viewing entire chat threads or daily message breakdowns.

## Preserved Attachments

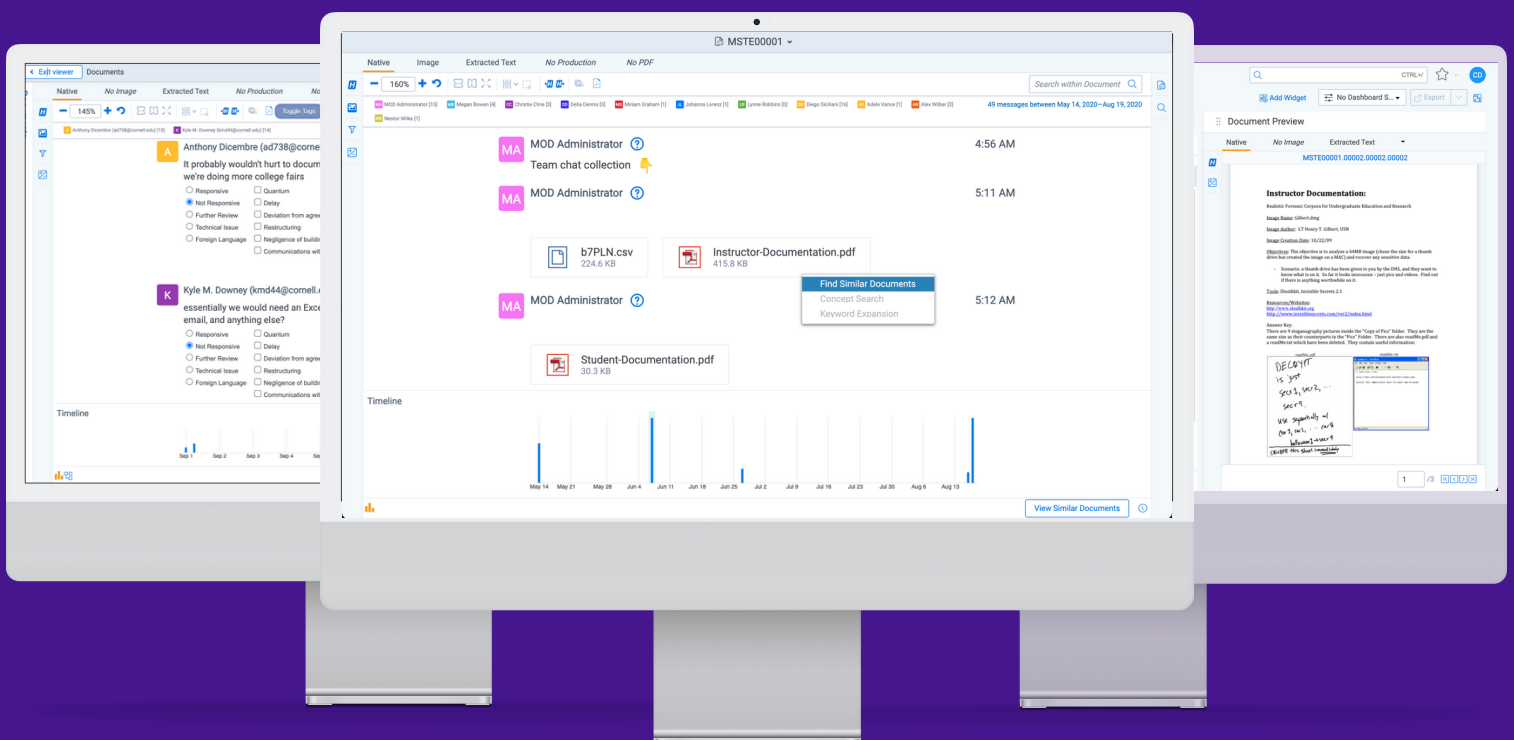

All links and attachments in chats are preserved and presented in-line, maintaining context during review.

## Tagging

For the first time, tag individual messages and attachments inline.

## Customizable

Define your own fields, single or multi-choice, circumvent non-responsive or privileged chat message redaction, and utilize mass-tagging.
